

Abstract:

Although Canadian work market have a high share of foreign workers, the low-wage migrant workers commonly encounter abuses during the migration process.

We offer a quick guide resource for people seeking information on their rights as farm laborers, emergency assistance, etc. and helpful resources related to their employment status.

We developed **KnowYourRights**, a mobile based platform that provides immigrant workers with legal provisions and complaints at workplace to protect their legal rights from being violated by using the high-fidelity prototyping methodology together with the React Native framework.

The application has been designed by considering necessary functions such as simple interface, language swift, transparency, data and device optimization.

The result of the development and testing are discussed.

also available, see
Figma link for detail.

Conclusion:

Provide an easy and friendly platform for foreign workers to understand their legal work rights. Further improvements includes storing data on cloud and bookmark feature.
